Art Unit: 3632

DETAILED ACTION

This is the second office action for U.S. Application 10/074,245 for a Spill Proof Shelf Assembly Method and Structure filed by Rakesh Mathur et al. on February 12, 2002.

Drawings

The drawings are objected to because figure 8 appears to be incorrect. Figure 8 is a bottom perspective view, however, the lines for that view appear to be incorrect (for example, 46 appears to be on the bottom of the apparatus, rather than the top). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 15-20 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: The prior art does not disclose a shelf with a first side and forward and rear tabs extending respective first and second distances from the first side, whereby the first distance is less than the second distance, and a first shelf side support with a laterally projecting ledge for sliding engagement with the shelf, whereby the ledge has a rear portion sufficient for retaining the rear tab, a forward

Art Unit: 3632

portion with a second width less than the width of the rear portion and providing a clearance for the rear and forward tab and one of the following: whereby the forward tab is configured to be forward of the ledge rear portion and under the ledge forward portion when the shelf is in the fully extended position; or whereby the side support has a plurality of support members that rigidly connect the side support and contact the forward tab when the shelf is in the first extended position.

Claim Rejections - 35 USC § 102

Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Fish et al. Fish et al. discloses a system for limiting outward movement of a slide-out shelf (46) that has a plurality of side supports (50 and 52) configured to support the shelf and having a ledge with a clearance portion (78 and the portion under it). There is also a plurality of support members (54 and 56) configured to rigidly connect the side supports and contact a portion of the shelf thereby blocking forward movement of the shelf (see col. 7, lines 41-43). The shelf has integral forward and rear stop tabs (148 and 144) and the front tabs extend laterally, while the rear tabs extend longitudinally.

Claim Rejections - 35 USC § 103

Claims 1, 2, and 6-14, and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kolbe et al. in view of Liang et al. Kolbe et al. discloses a system for limiting outward movement of a slide-out shelf. There is a plurality of side supports (23 and 24) with ledges (28 and the portion under it) that have a clearance portion,

Page 4

Art Unit: 3632

configured to support the shelf and there are support members (26) configured to rigidly connect the side members. The shelf is configured extends outward in a first direction and retracts inward in a second direction opposite the first direction. The ledge of the shelf appears to be wider at the rear portion the front portion (see fig. 2). Each ledge also has clearance portions (formed throughout the side support under the ledge 28) for supporting the shelf. Kolbe et al. does not disclose a plurality of gussets and gusset tabs configured to contact a portion of the shelf to block further movement.

Liang et al. discloses a shelving system with a side support (10 and 20) with ledges that have a clearance portion (the top of the inner channel) that has a rear portion (10) that is wider than the forward portion (20). The side support has an integral gusset that extends laterally inwards from it with a tab (41A or 41b) and the gusset is configured to contact a portion of a shelf to block further movement of the shelf. The shelf has rear and forward stop tabs (32b and 32a) and there is a clearance portion (the groove) for each tab so that the shelf can be extended until the tabs contact the gusset thereby preventing outward movement. It would have been obvious to one of ordinary skill in the art at the time of the present invention to have provided tabs and gussets on the shelf and support system taught by Kolbe et al., as taught by Liang et al., for the purpose of limiting the movement of the shelf.

Response to Arguments

Applicant's arguments filed April 29, 2003 have been fully considered but they are not persuasive. Applicant argues that Fish et al. does not disclose side supports

Art Unit: 3632

with a ledge portion, however, Fish et al. does disclose side supports with ledge portions (see rejection above). Applicant also argues that the system disclosed by Fish does not prevent outward movement of the shelf, however, the side supports contact the shelf and prevent it from moving outward.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988)and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Liang et al. discloses a system for limiting outward movement of a sliding shelf assembly. It would have been obvious to one of ordinary skill in the art at the time of the present invention to have utilized the teaching of Liang et al., to provide a sliding shelf assembly with limited movement.

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a

Art Unit: 3632

reconstruction is proper. See In re McLaughlin, 443 F.2d 1392, 170 USPQ 209 (CCPA

1971).

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Steven Marsh whose telephone number is

(703) 305-0098. The examiner can normally be reached on Monday-Friday from

8:00AM to 4:30 PM. Any inquiry of a general nature or relating to the status of this

application or proceeding should be directed to the receptionist whose telephone

number is (703) 308-2168. The fax phone number for the organization where this

application or proceeding is assigned is (703) 305-3597.
